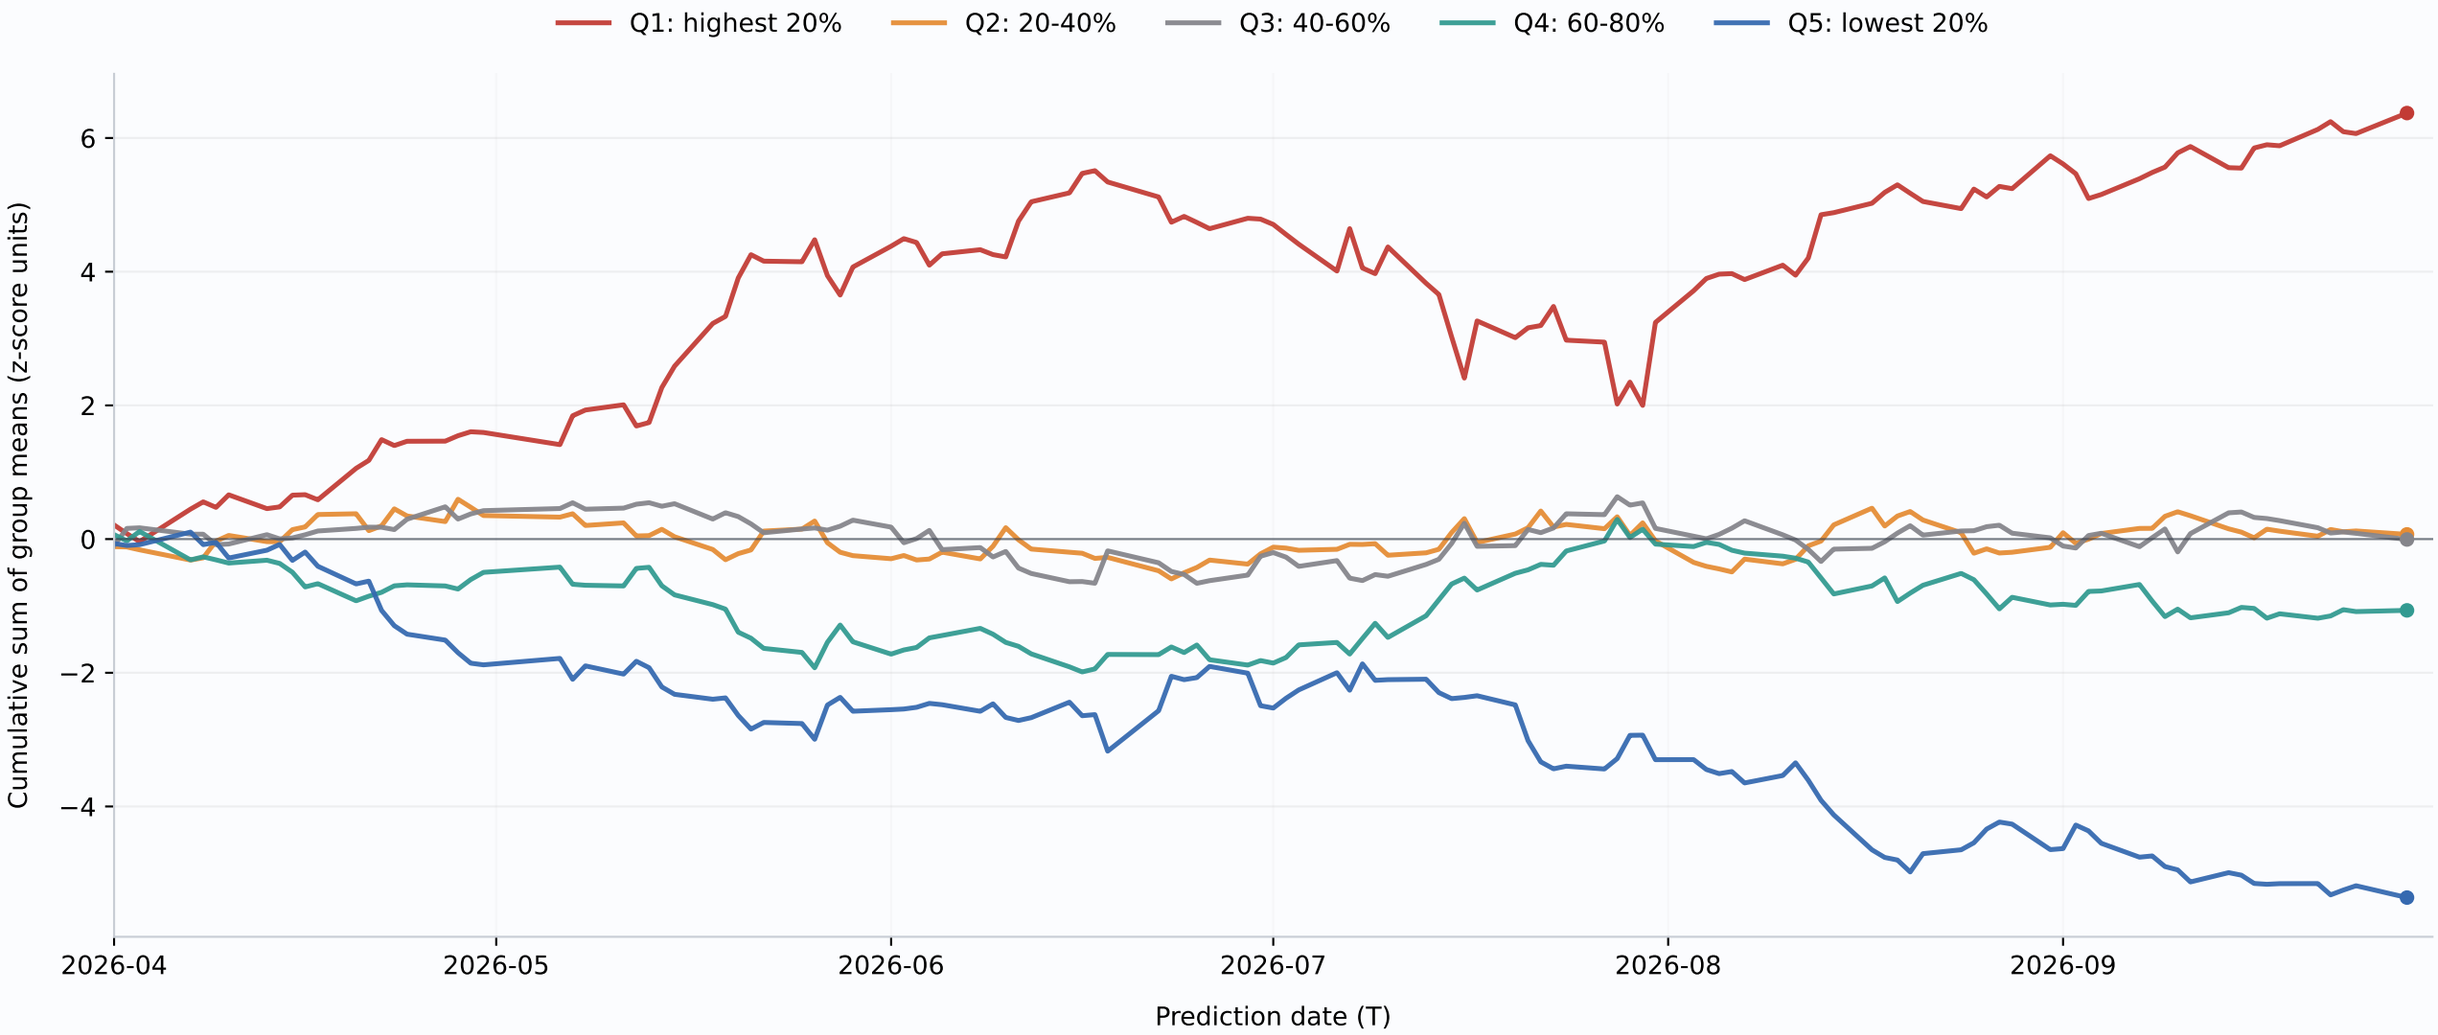
Polymarket extension: cumulative returns by prediction quintile

Q1 = highest predicted return. 60 stocks per group, re-ranked daily; 123 evaluated dates.



Target: cross-sectional z-score of close(T+2) / close(T+1) - 1. Arithmetic sum through each date, including that date.

Labels unavailable on 2026-09-29 and 2026-09-30; left missing. The vertical axis is not a percentage return or compounded wealth.
